

Power BI – How to import the Data

Introduction

In this document, I tried to self-learning how to import the external data to Power BI. I will try to import the excel file and SQL server database to be my example.

Step 1) Download the EXCEL and SQL server file first

Excel Sample Data:

You can find the below excel file in my github.

Financial
Sample.xlsx

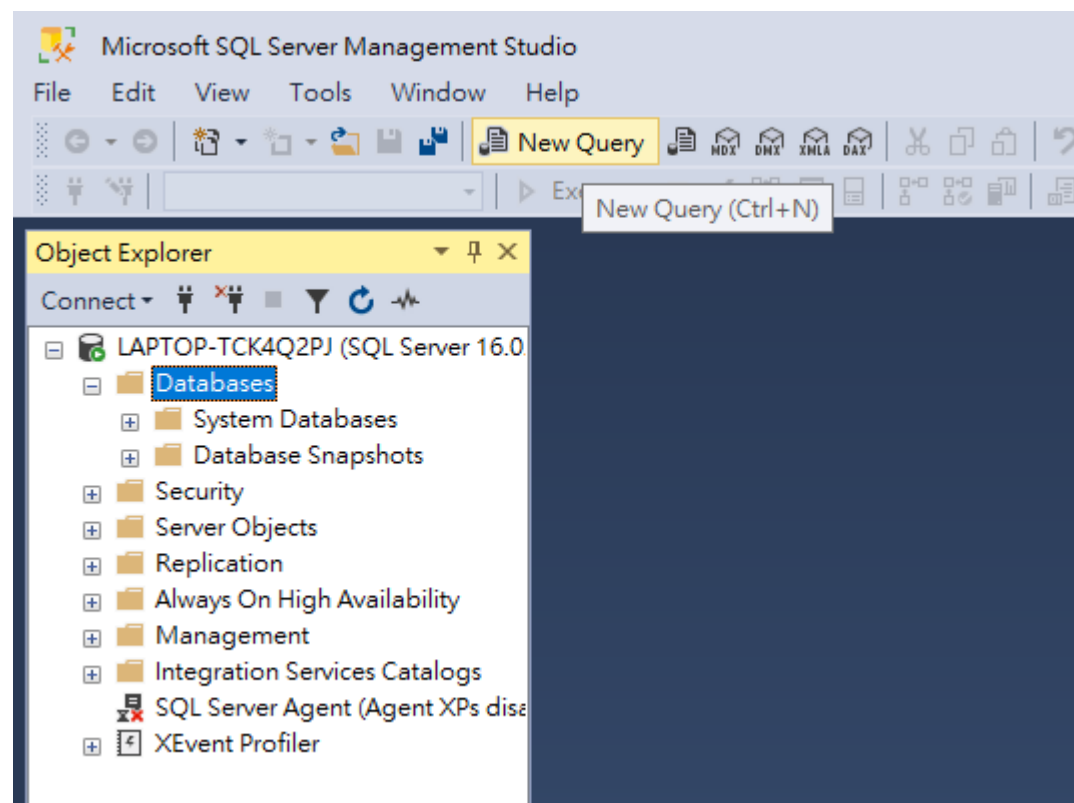

SQL server data:

I created the below sql script for create example database : PowerBI_Sample_Data

PowerBI_Sample_
DB.sql

You can login the sql server management studio, and click the New Query to run sql.

Step 2) Open the Power BI Desktop to try to import Excel

Excel file import

Step 2.1) Open the power BI desktop.

Step 2.1) Click “Import data from excel”

Add data to your report

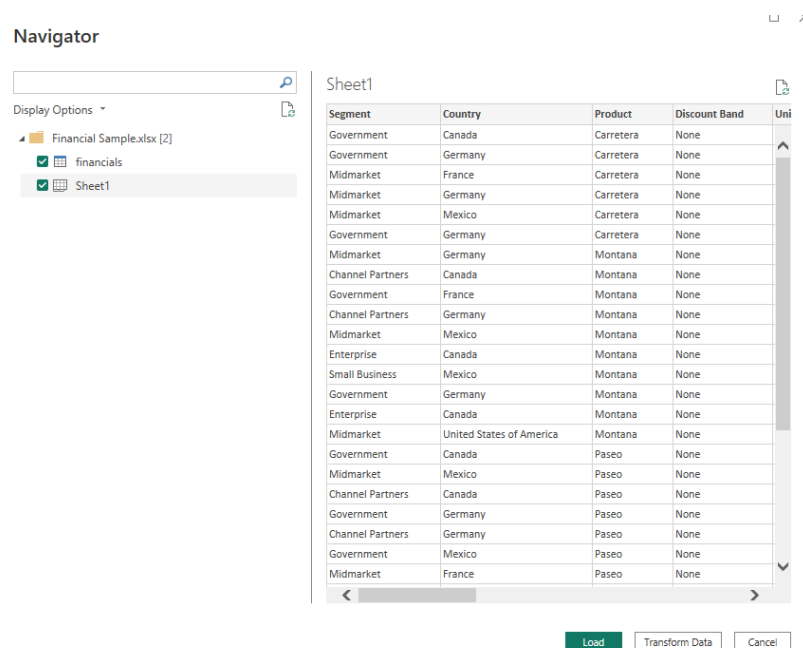

Once loaded, your data will appear in the **Data** pane.

Step 2.3) Choose the excel file (Financial sample.xls)

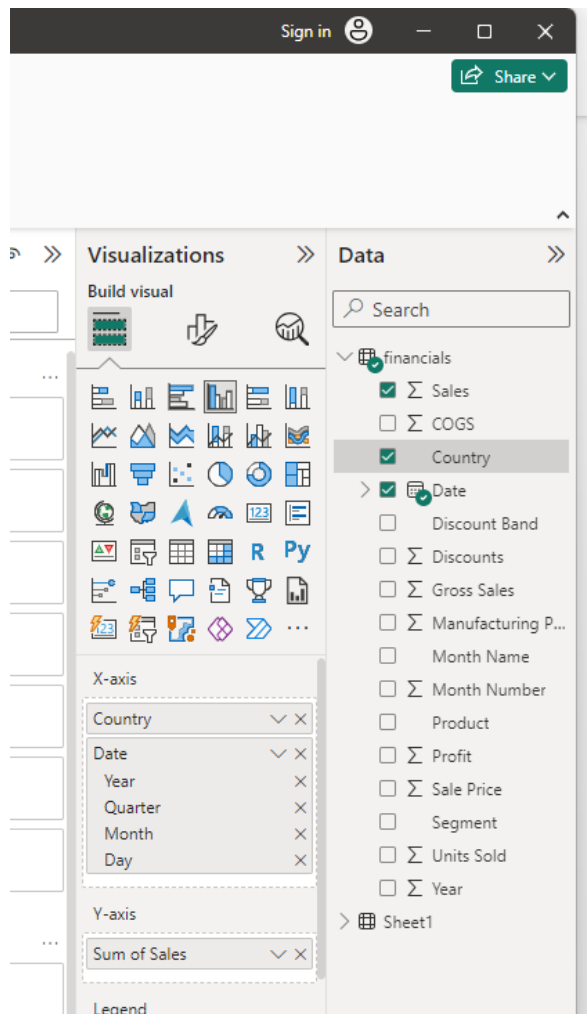

Step 2.3) select all table and click “Load” button.

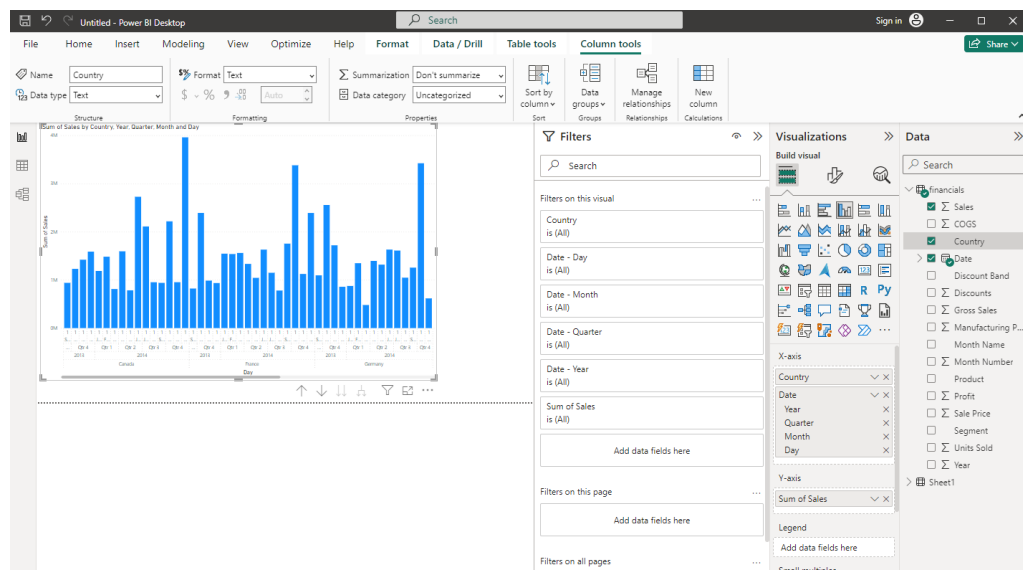

Step 2.4) After import, you can see the data. It success to import.

Checked “Sale”, “Country”, “Date”

Step 2.5) After checked the fields which you want to show. The chart is ready.

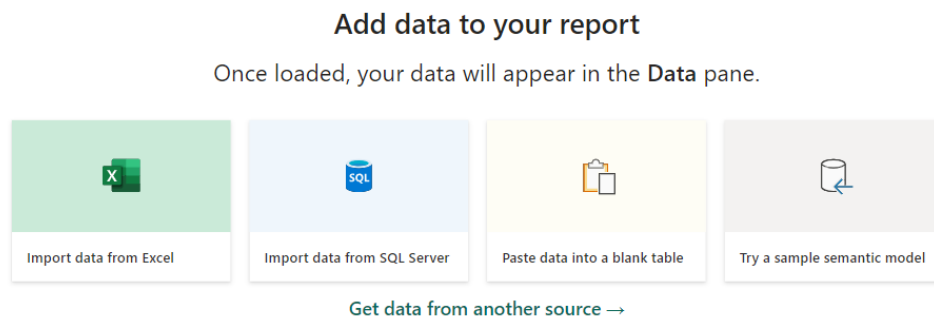

Step 3) Open the Power BI Desktop to try to import SQL

Excel file import

Step 3.1) Open the power BI desktop.

Step 3.2) Click “Import data from SQL server”

Step 3.3) In this example, assume your sql server name : localhost

Click “OK” button

SQL Server database

Server ⓘ

Database (optional)

Data Connectivity mode ⓘ
